Enterprise Risk Management Application & Case Studies

Presented by Kristina Narvaez, MBA President of ERM Strategies, LLC

Enterprise Risk Management

ERM provides a framework for risk management, which typically involves identifying particular events or circumstances relevant to the organization's objectives (risks and opportunities), assessing them in terms of likelihood and magnitude of impact, determining a response strategy, and monitoring progress.

By identifying and proactively addressing risks and opportunities, business enterprises protect and creates value for their stakeholders, including owners, employees, customers, regulators, and society overall.

Difference Between GRC & ERM

Governance Risk and Compliance (GRC)

Embraces compliance as a separate activity for each business silo.

Enterprise Risk Management (ERM) Is concerned with delivering measurable business value by tying front line operational activities to goals across all business units.

Burden of Compliance Suppresses Risk Taking Activities

Many organizations believe that they must continue to eliminate risk through compliance Risk has not been eradicated by regulation instead it has been driven underground Risk taking activities are not bad if an organization has established their risk appetite and risk tolerance levels and has the proper risk controls in place

Risk Appetite and Risk Tolerance

- Risk Appetite is the manner in which an organization and its stakeholders collectively perceive, assess and treat risk
- Risk Tolerance requires a company to consider in quantitative terms exactly how much of its capital its is prepared to put at risk

ERM Is Used for Risk Optimization

- Considering both the upside and downside outcomes of risk taking activities
- When threats and opportunities are better understood, risk taking is optimized and managers, in turn, will make more informed business decisions
- Improved decision making enables an organization to quickly meet emerging marketplace challenges

Six Step Approach to ERM

1. Risk Identification

1 Risk Identification

The process of taking inventory of all risks in an organization and defining the potential risk event, the causes to that risk event, and the potential outcome if that risk event were to occur

Focus not only on hazard or operational risks, but also strategic, financial, reputational, compliance, environmental, human capital and technology, market, and supply chain risks

Scope of Risk Identification

Risk Identification

Define where the source of a potential risk event is coming from; Inside or Outside the organization. Establishing risk categories helps to identify the sources of a risk event.

Strategic Risk Categories

Operational Risk Categories

Risk Identification

1

Financial Risk Categories

Other Risk Categories

Identify Subcategories

Risk Identification

Hazard Risk

Safety risk of increased slips, trips and falls accidents occurring in the organization

Operational Risk Human capital risk of 25% of workforce is eligible for retirement in the next 5 years

Financial Risk Credit risk of 35% of commercial loans will default in the third quarter

Strategic Risk

Sole supplier of a raw material has been acquired by competitor

Existing & Emerging Risk

. Risk Identification

Look not only at existing risks, but also the emerging risks to the organization.

- What new business processes have been added to the organization?
- What changes have been made in the organizational chart?
- What are some external risks that could impact the organization like economic, environmental, societal, geopolitical, and technological?

Know Where You Stand

1 Risk Identification

Meet with senior management to define the strategic goals of your organization

Review the mission and vision statements of the organization

Define the expectations of internal and external stakeholders

Don't Be Conflicted

Risk Identification

GlaxoSmithKline – A study in conflicting strategic goals

This conflict caused the quality control of manufacturing to suffer.

Case in point – the Cidra Plant in Puerto Rico made 20 drugs under unhealthy conditions that lead to a \$750 million FDA fine One of GSK's strategic goals was to sell safe and effective prescription medication

Another goal was to increase profitability by outsourcing manufacturing to other parts of the world

Next Steps

SWOT Analysis

Risk Identification Activities

. Risk Identification

Brainstorming

Can effectively generate lots of ideas of potential risk scenarios that could take place

Structured Interviews

Uses a risk survey or questionnaire to ask specific questions related to different types of potential risk events facing a particular risk owner or risk center

Top Down / Bottom Up Approach

UC's ERM Work Plan

Risk Identification

University of California has developed an ERM Work Plan for its employees. Within the context of campus/medical center's mission, the management team establishes strategic goals, selects strategy and aligns ERM objectives to the strategic plan. The enterprise risk management framework is geared to achieving objectives in four categories:

Strategic	Operations	Reporting	Compliance
High-level goals, aligned with and supporting their mission	Effective and efficient use of their resources	Reliability of reporting	Compliance with applicable laws and regulations

Key Performance Indicators (KPI)

Risk Identification

KPIs help you understand how well you are performing in relation to your strategic goals and objectives.

In order for KPIs to be effective, they need to be measurable.

- % of customer attrition
- % of employee turnover
- Rejection rate
- Meantime to repair IT problems
- Customer order waiting time
- Profitability of customers by demographic segments

Key Risk Indicators (KRIs)

. Risk Identification

KRIs are leading indicators of risk to business performance. They give us an early warning to identify a potential event that may harm continuity of the activity/project.

Supply Chain Disruption

Risk Identification

Some sources of risk are not directly under the control of the organization, but are a part of their supply chain.

March 11, 2011 - A massive tsunami devastated the coastline of Japan.

GM, who might had a competitive advantage to their Japanese competitors, had a transmission that was manufactured in Japan for its Chevy Volt

Tools and Techniques

Create A Risk Register

2. Risk Assessment

2 Risk Assessment

Risk Assessment is a process to determine the cause of the risk event, the risk event itself, and the impact and the velocity of the risk event.

Quantitative Assessment-Measures the value of the impact Root Cause Analysis- Find the root cause of a potential risk event

Qualitative Assessment-Recognizes the source of the risk event

Causes of Risk

Three Basic Causes

Physical causes

A tangible or material item failed in some way.

Brakes stop working on a car

Human causes

People did something wrong or did not do something required.

No one check the condition of the brakes

Organization causes

A system, process or policy that people use to make decisions in doing their work is faulty.

No procedure for checking the maintenance of the cars

Root Cause Analysis

2 Risk Assessment

Fault Tree Analysis

2 Risk Assessment

Very useful in examining the possible conditions that may lead to a desired or undesired event Top event will be placed at the top of the tree and all subsequent events that lead to the main event will be placed as branches

Symbols provide a pictorial representation of the event and how it interacts with other events on the tree

Qualitative Analysis

2 Risk Assessment

Positive Fault Tree Analysis

Will identify the events necessary to achieve a top desired event for example no accident in manufacturing facility

Negative Fault Tree Analysis

Constructed to show those events or conditions that will lead to a top undesired risk event such as a fire in the manufacturing facility

Quantitative Analysis

2 Risk Assessment

When the likelihood of an event is know and a probability value has be assigned, then analysis of these events on a fault tree will also yield quantitative results.

Financial impact can be added to each stage of the Fault Tree Analysis.

Risk correlation can be demonstrated.

State of Washington's Nine Step Approach to Root Cause Analysis

2 Risk Assessment

3. Risk Analysis

3 Risk Analysis

Department of Homeland Security

Risk Analysis

DHS plays a leadership role in the Nation's unified effort to manage risk working across the homeland security enterprise which includes Federal, state, local, tribal, territorial, non-governmental and private sector entities.

As part of the analysis in their ERM program, DHS used an integrated risk management structure to share risk information and analysis.

The goal of using integrated risk management structure is to be able to work with its partners to address uncertainty inherent in their complex mission space, and help make the tough decisions necessary to keep the nation resilient and secure with limited resources.

DHS Analysis Tools

3 Risk Analysis

DHS uses Influence Diagrams to analyze the interrelationships and interdependencies of risks across the enterprise.

Figure 3.4—A Systemic Perspective

DHS Analysis Tools

3 Risk Analysis

FEDERAL SECURITY RISK MANAGEMENT

DHS uses analytic tools like RAPID-Risk Assessment Process for Informed Decision-Making to manage risks associated with their strategic goals.

Value of Data Analysis to DHS

3 Risk Analysis

Data analysis allows for more transparent and defensible decisions.

Contextualizes homeland security threats, showing which are the most likely and which have the highest impact.

Helps prioritization decisions among terrorism, natural disasters, cyber, pandemics, and border security hazards.

Provides a performance measure for programs across the homeland security mission space.

Identifies opportunities for reducing risk exposures of potential risk events.

Allows for understanding of the impact of combined risk exposures taking place at the same time.

4 Implementation

Implementation - incorporating an ERM structure, practices, and strategies to fulfill the goals of the organization.

ERM framework

Risk controls

Risk champions and risk centers

Risk communication structure

Crisis management protocol

Business Continuity

ERM Frameworks

4 Implementation

 Focus is to establish ERM goals as part of the strategic management process. It does not dive into the details of risk management approaches and process, but addresses threats to the organization and the need for proper controls.

ISO 31000

COSO

 Rooted in risk management principles and designed to provide an organized methodology to evaluate risk exposures and react to the environment.

Risk Controls

4 Implementation

Management is responsible for implementing appropriate controls to reduce risk and to achieve operational objectives.

Risk Champions and Risk Centers

4 Implementation

Risk Champions

- Accountable for ensuring accuracy within their department or business unit around the identification, assessment, management and monitoring of risk
 - They are the eyes and ears of risk information for the risk manager who is in charge of assessing risk across the enterprise
 - Not necessarily responsible for performing the actual risk management activities

Risk Center

 A department or unit within the organization charged with the risk exposures that are related to their duties and responsibilities

Intuit Case Study

4 Implementation

"When we talk about growth strategies for the company, we talk deliberately about both risks and opportunities" Janet Nasburg, **Chief Risk Officer** at Intuit

INTUIT

CRO and ERM program office have ownership and accountability for Intuit's ERM program and drive Intuit's ERM capabilities

Ownership and accountability for identified risks are shared by executive and business unit level leaders

Risk communication is not only to report progress, but also so that business units can share and leverage risk knowledge

Risk Communication Structure

4 Implementation

Crisis Management

4 Implementation

Risk communication becomes a key component in surviving a crisis situation Messages to all stakeholders must be clear, address the pressing issues and engage all the stakeholders to be diligent in plans of recovery

Communication must demonstrate that senior management is committed to maintain an environment of transparency in it decision making

Crisis Management

Elements of Continuity Plan

4 Implementation

5. Monitoring

5 Monitoring

Monitoring involves communication of risk both upstream and downstream across the organization. It includes periodic reporting and follow-up on the risks by various levels of management, risk committees, and internal auditors

KPIs and KRIs are a valuable way to monitor key risks linked to improved cash flows and earnings

Tools Used for Monitoring

5 Monitoring

Critical Risk: Mitigation Plan

5 Monitoring

Critical Risk: Mitigation Plan

6. Evaluation

Risk Optimization

Balance between taking on too much risk and not taking on enough risk to explore opportunities for growth

Explore various riskreturn outcomes

Evaluate risk controls in place and decide the best use of financial resources to provide needed protection

Cost of Risk

Each year University of California holds an Annual ERM Summit focused on their continuous effort in improving their ERM program by reducing their Cost of Risk. Case Study: University of California

Since 2003-2004 fiscal year, they have reduced Cost of Risk by \$493 million dollars

Reduced the Cost of Risk from \$18.46 per \$1,000 of operating budget to \$13.31 per \$1,000 of operating budget

Risk Governance

6 Evaluation

Key drivers of success and risks in the company's strategy Crafting the right relationship between the board and its standing committees as to risk oversight Establishing and providing appropriate resources to support risk management systems

Monitoring potential risks in the company's culture and incentive systems

Developing an effective risk dialogue with management

Guidance principles for board risk oversight

National Association of Corporate Directors report, "Risk Governance: Balancing Risk and Reward"

Executive Risk Committee

Evaluation

The Executive Risk Committee Provides the Board of Directors with:

A structure that provides the board with the appropriate information that defines the firm's risk profile

A system that provides an audit of the effectiveness of the risk management process

A system that affords an evolving understanding of key risks to the company

"Boards are now finally asking management about the nature of the risk information process in place. Boards want to gather information about new or emerging risks and the extent to which these risks require a more in-depth analysis. This is being done to ensure future opportunities and threats to the company's performance are appropriately managed".- John Bugalla, James Kallman, Chris Mandel and Kristina Narvaez in *The Corporate Board*
